

# SWARCO SIGNS

## BLANK-OUT SIGNS

Blank-Out Signs (BOS) by SWARCO Signs are an excellent way to provide clearly visible information to motorists, even in direct sunlight. The Blank-Out Sign is a superior alternative to static warning and regulatory signs due to their increased visibility, creating a safer driving environment and are ideal for reinforcing traffic signals and minimizing undesirable motorist movements.

### KEY BENEFITS

- Create a safer driver environment
- Reduce total cost of ownership with low energy consumption and minimal maintenance
- Improve visibility with wider angles and superior contrast ratios
- Eliminate glare caused by sunlight and headlights
- Respond to ambient light with automatic dimming
- Eliminate additional cooling equipment due to little or no heat emission
- Simplify maintenance with easily replaced DIN rail components

### PRODUCT DESCRIPTION

The BOS is equipped with patented lens technology and flat black front panels creating a high-contrast ratio for superior visibility. Front and back light sensors, plus dimming circuitry allow for the automatic adjustment of the message's luminosity under all environmental conditions.

The BOS has a reduced total cost of ownership due to low energy consumption and minimal maintenance costs. If maintenance is required, the sign's interior is accessible through a full front-access door that can be fixed at 90° and all components can be easily removed and replaced with simple hand tools.

Offering both custom and standard symbols/messages that conform to the Manual on Uniform Traffic Control Devices (MUTCD) standards, you're sure to find the right configuration for your needs.
